# PRESCRIPTION MEDICATION

*Medication costs shouldn't be a tough pill to swallow*

While prescription medication is a cornerstone of employee benefits plans, the cost of prescription medication is one of the biggest risks to your financial stability. At GroupHEALTH, we encourage all employers to take control of costs and mitigate risk by adding features to contain the costs of their prescription medication coverage.

## WHY IS THIS IMPORTANT?

Both the cost and use of prescription medication are increasing. According to Statistics Canada, **more than half of Canadian adults**  aged 18-79 have used at least one prescription medication in the last month. Considering that 70% of specialty medications can cost **between \$10,000 and \$100,000** , prescription medication can easily become the largest and most volatile cost to your benefits plan.

# CONSIDER THESE COST-SAVING TOOLS

These plan components can be used together or separately—each help to save on costs, and make prescription medication easier to use or maintain!

## Work as a team to keep prescription medication costs in check

### *Managed Rx*

Employees get better prescription coverage when they opt for delivery of generic or therapeutic alternatives—and as an employer, you get major cost-savings.

## Protect your employees, protect your plan

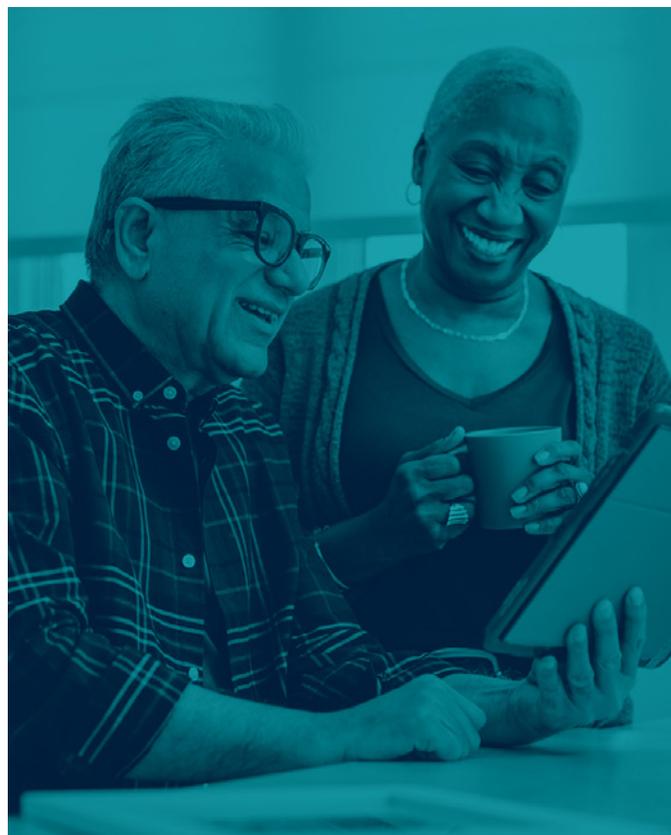

### *FormuCARE & FormuCARE PLUS*

These unique services help employees find alternative funding sources for high cost or experimental medications—protecting the financial sustainability of your plan—while continuing to provide broad coverage for most of your employee's prescription medication needs.

## Maintenance medication on autopilot

### *maintainRx*

When taking prescription medication becomes routine it makes sense to set up ongoing delivery. Save your employees time and keep prescription medication costs as low as possible.
